Rattan Stool

OPIS

Rattan je material, ki se običajno povezuje s košarami ali pohištvo iz ratana, za katerega se pogosto uporablja. V tem projektu je bil ratan uporabljen za isti namen - ustvarjanje stolčka, vendar na precej nenavaden način v primerjavi z običajnimi tehnikami tkanja. Je trajnosten in vzdržljiv ter je izjemen les, ki se sam obnavlja v samo 5-7 letih. Oblikovalci obožujejo ratan za ustvarjanje pohištva, ker je proizvodnja nizkotehnološka, proizvodni proces pa običajno vključuje ročno izdelavo ali uporabo struktur, ki nimajo negativnega vpliva na okolje.
